

SUSTAINABLE TIMBER. SMARTER BUILDING.

At Wesbeam, we believe great buildings start with great choices. That's why our Laminated Veneer Lumber (LVL) is made from sustainably managed timber, sourced right here in Western Australia - supporting local communities, reducing waste, and storing carbon for the life of your project.

What Makes Us Different?

100% of every log is put to good use. Nothing goes to waste. The high-strength wood fibre becomes our LVL, while residues like bark, chips and offcuts are given a second life: chips are used in the manufacture of particleboard, offcuts become pallets and gluts, and bark is turned into mulch.

Sustainably Sourced, PEFC Certified. All our timber is sourced through a PEFC (Programme for the Endorsement of Forest Certification) Chain of Custody certified supply chain, ensuring it meets internationally recognised sustainability standards. This includes timber from well-managed Western Australian plantations and ecological thinning, all verified as responsibly sourced.

PEFC is a global alliance promoting sustainable forest management through independent third-party certification. Our PEFC Chain of Custody certification is audited and verified by the Engineered Wood Products Association of Australasia (EWPAA).

Carbon smart. Because timber stores carbon, every Wesbeam LVL beam you use locks away CO₂ for the life of the structure. In fact, around half the dry weight of timber is carbon, absorbed from the atmosphere as the tree grows. By building with Wesbeam LVL, you're not only choosing a high-performance product, you are helping reduce greenhouse gas levels and making your projects greener from the ground up.

Light-weight, heavy-duty. Our engineered LVL is strong, straight and reliable — a high-performance alternative to steel and sawn timber. It's perfect for modern construction and is significantly lighter and easier to handle than steel beams or hardwood, making it ideal for fast, efficient building on site.

Locally Grown, locally made. From forests just outside Perth to our state-of-the-art manufacturing plant, our whole process stays close to home, lowering transport emissions and supporting WA jobs.

Supporting Sustainable Forestry

We support Western Australia's sustainable forestry industry through our long-term partnership with the WA Forest Products Commission (FPC), sourcing timber through their certified supply chain.

The WA Government is investing \$350 million to expand softwood plantations in the South West, securing a sustainable timber supply for future generations and supporting local jobs.

Build Smarter, Build Sustainably. Wesbeam LVL turns often lower value logs into high-performance engineered timber, offering strength, consistency and environmental peace of mind.

LET'S BUILD A MORE SUSTAINABLE FUTURE TOGETHER.
